

Mini Range

Waterless Toilet

Nature Loo Mini Toilet

The Nature Loo 'MINI' system is a waterless toilet. The sterile urine is kept separate from the solids and is directed into a small bathtub sized gravel absorption trench (or can be collected and diluted and used as a fertilizer). A low wattage ventilation fan run on solar or mains power pulls air through the system which dehydrates the solids.

This style of waterless toilet using bio bags is common in Europe and America.

Australian Designed and Assembled

Choose a suitable site to install the toilet

Specification

Capacity	1 people on a permanent basis
